

We offer the only scale system with truly wireless sensors for every type of axle and suspension (including walking beam, leaf spring, and air ride).

All sensors include replaceable batteries that can last up to five years thanks to our built-in power management technology.

**NO Welding
NO Bolting
NO Drilling
NO Soldering
NO Crimping
NO Heat Shrink
NO Heat Guns
or Flames**

**NO Tedious Pre-loading or
Tuning Procedures**

Most Importantly - NO Exposed or Running Wires

Adding real time scale data to the power of our telematics provides a command center view of every truck & trailer in your fleet. Knowing where and what they weigh at any given time allows you to confirm pick-up and delivery or even unscheduled weight changes during a trip.

THE MOST ACCURATE INNOVATIVE ON-BOARD SCALE SYSTEM

As a former dealer for various on-board scale companies, the headaches and shortcomings we endured with their products lead us to believe, there had to be a better way! It was this foundation that challenged us to revolutionize the market with a more advanced and reliable product. The result - the first and only **truly wireless on-board scales**.

This **patented** approach means fast and simple user install with minimal tools required. Most importantly **NO timely wire routing**, which are bound to become damaged later. In under two hours, our customers are ready to calibrate the most accurate on-board scale system on the market.

Additionally, unlike the countless competitors in a crowded space, our unique approach results in **little to no recalibration**, while still maintaining its extreme accuracy! Calibration data is stored directly to the display device, as well as our remote cloud for convenient and simple recovery, if needed.

Other "wireless" systems often suffer from signal interference, not ours! Built-in signal amplifiers enable up to **140 feet** of obstructed communication between sensors and receiver. No need to exit your cab or unsafely hang out the window to get a reading! Accurate scale data is transmitted to the driver via a smart device or dedicated display, giving them peace of mind the truck is being used to its **fullest potential without being overloaded**.

Brilliant Technology Made Simple to Use at an Incredible Value
