HOW TO USE THE WLS555 SCALE

1. Turn on your machine
2. Turn on tablet (hold top button on the right side of tablet)
3. Turn on printer (hold power button until lights come on)
4. Open tablet, make sure Wi-Fi is connected (auto connects once machine is on for about 45 seconds)
5. Once the tablet is connected to the systems Wi-Fi, open the SCI app from the home screen
6. You can change your materials, attachments, customers, and target weight by simply tapping on the item you'd like to change! (ex: on the bar where your customers name is, tap on the name, and select which customer you are loading, then click ok)
7. If you are ready to load, click **START**, scoop your material, and raise the bucket until it shows weight on the top of the screen
8. Repeat this process until you have reached the target weight, click **FINISH** and a ticket will print. If you need multiple tickets click the feed function on the printer (next to the power button)

*NOTE: If the last load makes total weight higher than target weight, click **TIP OFF** on the bottom of the screen, tip the bucket while still in the air dropping material. Once weight is enough, lower bucket, click **FINISH TIP OFF**, and raise again for a new weight.*
